SUMMARY

B.Sc. Computer Science undergraduate with hands-on experience in data analysis, dashboarding, and process automation, alongside a solid foundation in programming and databases. Skilled in transforming raw operational data into actionable insights using Power BI, Excel, and Python, with working exposure to application development through Power Apps and web technologies. Quick to pick up new tools and eager to contribute to technical and analytical projects.

SKILLS

Programming & Databases: Python , MySQL

Data & Analytics: Power BI, Tableau, Microsoft Excel (data cleaning, analysis, reporting)

Automation & Low-Code: Microsoft Power Apps, UiPath

Web (foundations): Flask, React, HTML, CSS, JavaScript

LeetCode: leetcode.com/u/Madhumitha_Rajesh

EXPERIENCE

- Intern** — *ELGI Equipments Limited* Feb 2026 – May 2026
- Developed an Attendance Tracker application using Microsoft Power Apps with history logs and report generation, replacing a manual register-based attendance process for the team.
- Intern** — *Shanthi Gears Limited* Nov 2025
- Collected, cleaned, and organized machine-wise production data in Microsoft Excel to support performance analysis across the shop floor.
 - Analyzed Equipment Load Ratio (ELR%) and Equipment Load Ratio Efficiency (ELRE%) to evaluate machine performance and identify production bottlenecks.
 - Built Power BI dashboards tracking ELR% and ELRE% trends across 7 machine categories (Turning, Bore Grinding, Cylindrical Grinding, Gear Hobbing, and others) over a 2-year period, enabling month-over-month performance comparisons for the production team.

PROJECTS

- Petri Dish Growth Simulator — Bacterial Growth Under Antibiotic Stress** — *Mini Project* June 2026
- Built a real-time bacterial growth simulation modeling 3 species across a 60×60 grid with adjustable temperature, nutrient level, and antibiotic concentration, using a logistic growth equation and Gaussian temperature-response formula to model all 4 growth phases (lag, exponential, stationary, death).
 - Built with Python/Flask backend and React frontend; results dashboard visualizes the population growth curve and a live antibiotic clearance profile (exponential decay curve).
- Data Analytics Job Simulation — Deloitte Australia (Forage)** — *Virtual Job Simulation* May 2025
- Built classification logic in Excel to categorize employee pay equality scores into Fair, Unfair, and Highly Discriminative bands based on defined threshold rules, supporting a workplace pay-equity analysis.
 - Analyzed factory telemetry downtime data in Tableau — created a calculated field to quantify downtime, built two bar charts (downtime by factory, downtime by device type), and combined them into an interactive filtered dashboard to identify the highest-downtime factory.

EDUCATION

- Bachelor of Science in Computer Science** — *PSGR Krishnammal College for Women* Apr 2027
- CS Academy, Kovaipudur, Coimbatore** — Higher Secondary May 2024
- Delhi Public School, Nacharam, Hyderabad** — Secondary school Jun 2022

CERTIFICATIONS

- Data Analysis with Spreadsheets and SQL — Coursera
- Power BI for Beginners — SimpliLearn
